Versioning

EverTrust uses Semantic Versioning 2.0.0 as defined at <https://semver.org>. Given a version number **X.Y.Z**, increment the:

- X → MAJOR version comes out on average every two years. It can contain breaking changes i.e. incompatible API changes, so you may need to do some changes in your applications before upgrading.
- Y → MINOR comes out on average every six months: It contains bug fixes and new features, but it doesn't include any breaking change, so you can safely upgrade your applications.
- Z → PATCH comes out roughly every quarter. It only contains bug fixes, so you can safely upgrade your applications;

LDOS

Last Date of Support : The last date to receive applicable service and support as entitled by active service contracts for covered products. After this date, the service is no longer available.
